

Data Brief

Heroin and Non-Heroin Opioid-Related Treatment Admissions 2006 — 2016

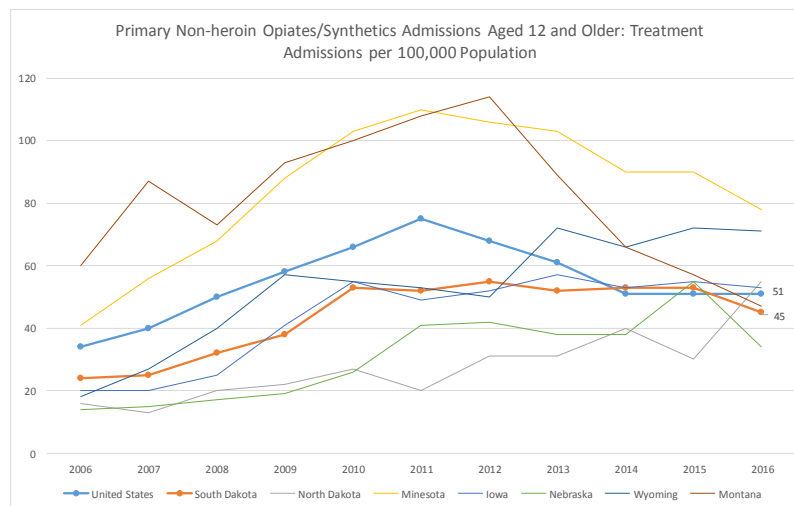

December 2018

There were 420 treatment admissions for clients who identified heroin or non-heroin opioids as their primary substance in 2016 in South Dakota. The number of treatment admissions with non-heroin opioids as the primary substance increased from 2006 through 2010 and remained relatively stable from 2010 through 2015. Increases in number of admissions occurred for heroin in 2016 along with a decrease in Non-heroin admissions.

Similar trends are observed for non-heroin opioid treatment admissions in states bordering South Dakota. It should be noted that South Dakota's 2016 admission rate for non-heroin opioid treatment admissions of 45 per 100,000 is below the national average of 51 per 100,000.

Notes: Non-heroin opiates/synthetics include prescription drugs such as codeine, hydrocodone, morphine, opium, oxycodone, etc. An admission is defined as the formal acceptance of a client into substance abuse treatment, and has occurred if, and only if the client begins treatment.

Support for this document and support for the South Dakota Substance Abuse Epidemiological Outcomes Workgroup is made possible by the Center for Substance Abuse Prevention, Substance Abuse Mental Health Services Administration (CSAP-SAMHSA).
